PROFILE SUMMARY

Data Analyst with 2+ years' experience using SQL, Power BI and Python to investigate large operational datasets, reconcile discrepancies and deliver KPI reporting for finance and supply-chain stakeholders. Built automated Power BI dashboards and SQL ETL pipelines that reduced manual reporting by ~70%. Strong at root-cause analysis, data validation and clear stakeholder communication.

WORK EXPERIENCE

Big Data Analyst | Tech Guild | 2024 – 2025 | London, UK

• Analysed 5M+ daily records using SQL, Python and PySpark to validate data quality, reconcile sources and support operational reporting.

• Built automated Power BI dashboards (DAX, Power Query) for KPIs and trend analysis, cutting manual reporting effort by ~70%.

• Developed SQL-based ETL pipelines to clean, transform and integrate multi-source data, enabling consistent finance and operations metrics.

Software Engineer – Data Analytics & Product Development | Securden Technologies | 2022 – 2023 | Chennai, India

• Investigated application logs, database queries and backend services to identify data and product issues, reducing recurring defects by ~20%.

• Wrote and optimised SQL queries in PostgreSQL, improving query execution time by ~30% and supporting reliable reporting.

• Collaborated with QA, marketing and UX to translate business requirements into data-driven features and fixes.

Research Data Analyst | SimBioen Labs | 2021 – 2022 | Chennai, India

• Validated experimental datasets by resolving missing values, inconsistencies and outliers, achieving 99%+ data quality.

• Applied statistical tests (t-tests, ANOVA) and produced 5+ analytical reports to support research decisions.

PROJECTS

AI Companies & Foundation Models Dashboard (Power BI)

Built a Power BI dashboard analysing 11 AI companies and 3,000+ foundation models using Power Query, DAX and dimensional modelling to deliver executive-ready KPI visuals and interactive filters.

UK E-Commerce Customer Segmentation & Analytics

Analysed ~1M UK e-commerce transactions using SQL-style logic in Python and RFM analysis; segmented customers into high- and low-value groups to inform targeted retention strategies.

SKILLS

Data Analysis & Investigation: SQL (PostgreSQL), Python (Pandas, NumPy), PySpark, large-scale data reconciliation, root-cause analysis, data validation

Reporting & Visualisation: Power BI (DAX, Power Query), KPI dashboards, stakeholder reporting, Advanced Excel

Data Engineering Basics: ETL pipelines, data modelling, data quality controls, AWS S3/EC2 (basic)

Domain & Soft Skills: Operational/finance data analysis, supply-chain adjacent analytics, GDPR principles, Agile/Scrum, clear stakeholder communication

Education: MSc Artificial Intelligence & Data Science (Distinction), University of East London, 2023–2025

Certifications: Google Data Analytics Professional Certificate; GDPR
